

Color Certification

Our OS pigments meet the requirements of Resap (2008)1, the ruling of 21/12/2012 and the new pharmaceutical regulation from 04/2013 concerning nickel. Furthermore, every pigment raw material is tested on possible contamination by independent accredited laboratories. We guarantee that all our pigments are made of high-purity raw materials, are run through production processes like mixed and dispersed under vacuum and sterilized with gamma rays. Your pigments do not contain any preservatives to avoid allergies. We only use pigments whose raw material quality is guaranteed on ResAP (2008)1.

Swiss Color® OS pigments don't contain: iron oxides, dangerous Azo dyes, polycyclic aromatic hydrocarbons = PAH, forbidden heavy metals, dangerous aromatic amines including NDELA = N-nitrosodiethanolamine.
